Demystifying Cell Site Analysis

DATE Thursday 5 May 2011 5.30PM

VENUE 9 St John Street
Manchester M3 4DN

DEMYSTIFYING CELL SITE ANALYSIS

Cell site analysis is the technique of placing a mobile phone at a particular geographical location at a specific time.

Who doesn't have a mobile phone? That small handheld device is in constant communication with the network and like Big Brother is always watching you!

Cell site analysis is a powerful tool that can be used to prove whether a mobile phone was in an area of interest at a particular time and confirm or refute an individual's alibi.

Speaker: **Heather Grills** First Forensic Solutions

1.5 CPD points

Heather Grills is a founding member of the First Forensics team – she started her forensics career with FSNI, the Forensic Science Agency in Northern Ireland, where she swiftly became a senior scientist in the electronics unit performing mobile phone examinations and computer examinations for the Police Service of Northern Ireland. Heather has a Masters Degree in Electronic Engineering from Queens University Belfast and a Postgraduate Certificate in Computer Forensics from Cranfield University, Shrivenham.
